Input	Process	Output	Actual Output	Pass/Fail	Notes/Solution
Click Home Tab	Home Page Loads	Home Page Appears	Home Page Appears as designed in wireframes.	Fail	The footer wasn't showing.
Click About Tab	About Page Loads	About Page Appears	Actual Output as planned	Pass	The image had to be smaller, but h1 and h2 as planned.
Click Nature Tab	Nature Page Loads	Nature Page Appears - can navigate	As planned	Pass	
Click Portrait Tab	Portrait Page Loads	Portrait Page Appears - can scroll through	As planned	Pass	Images came out a bit larger than planned.
Click Contact Tab	Contact Page Loads	Navigate Through Page	Form & Image as planned/ header and footer changed size when changing margin.	Pass	
Submit Button Contact Page	User Presses Button	Takes user to email when presses on submit button.	It worked but not as planned.	Pass/Fail	The button was supposed to turn a lighter tone of grey.
Contact Form	User Enters Details	User Submits and email sent.	Worked as planned	Pass	The message box had to come a bit bigger.
Click on book tab	Book Page Loads	User can navigate through page. User chooses which service.	As Planned.	Pass	
User clicks on boxes of form.	User enters details	User submits.	As for the form it works properly/Layout not as planned.	Fail	There had to be a back button & the email box had to come next to the name box.
Submit Button	User Clicks on Submit Button	Takes user to email.		Pass	

| Cancel Button	User Clicks on cancel button	Navigates user back to Home Page.	As Planned.	Pass	
Facebook Button	User Presses on Button	Takes User to Page	Works	Pass	Link on button
Instagram Button	User Presses on Button	Takes User to Page	Works	Pass	Link on button
LinkedIn Button	User Presses on Button	Takes User to Page	Works	Pass	Link on button
Box Hoover on Home Page Nav bar	User clicks on about on nav bar	Takes User to about page	Works	Pass	
Box Hoover on About Page Nav bar	User clicks nature tab on nav bar	Takes user to nature page	Works	Pass	
Box Hoover on Portrait Nav bar	User clicks on contact tab on nav bar	Takes user to contact page	Works	Pass	
Box Hoover on contact on Nav bar	User clicks on book tab bar on Nav bar	Takes user to book page	Works	Pass	
Box Hoover on book on Nav bar	User clicks on contact tab on Nav bar	Takes user to contact page	Works	Pass	
Box Hoover on portrait Nav bar	User clicks on portrait tab on nav bar	Takes user to portrait page	Works	Pass	
Box Hoover on nature Nav bar	User clicks on nature tab on nav bar	Takes user to nature page.	Works	Pass	
Box hoover on about page	User clicks on about tab on nav bar	Takes user to about page	Works	Pass	
Box Hoover on home page	User clicks on home tab on nav bar	Takes user to home page	Works	Pass	

2. Validated Code:

 As to validate my code each html and CSS file were copy and pasted in the validator.

For my index/home page there weren't many errors except for the footer not appearing on the screen. Some missing elements and missing closing tags were missing.

About me page - again some missing closing tags and missing elements. As for the image of the about me page the width and height were added to the html instead of the CSS, so I had to add another container in my CSS for the image. The about me title was listed as a <header> rather than an <h1>. The footer wasn't aligned in the canter then I had to add margin left and margin right in order for it to come in the centre.

Nature page - had the same problem with the images the height and width were added in the html rather than the CSS, also the image file names had spaces which led to many errors especially since the nature and portraits contains of a lot of images.

Portrait page - the same errors as the nature page. All file Images were arranged without the spaces in between and the width and height were set on the nature and portrait CSS for each image.

Contact Page - setting up classes for elements on the contact page, as well as dealing with duplicate attributes causing unexpected layout shifts.

Book page - for the book page I didn't have a lot of errors too just some unclosed tags and missing elements as mentioned before.

3. Current issues on the website:

1. Missing footer in the home page - improvements: adjusting the size of the image, adjusting the margin bottom viewing the browser's developer tool to see where the problem is.
2. Some of the images came looking out a bit bigger than others - improvements: adjusting the size of the images, decreasing the size.

The contact form has IDs with whitespace and some elements were repeated causing many errors.

Ways to improve next time in the contact form container:

Using browser's developer tools to inspect the elements causing layout shifts. Identify which attributes are duplicated or causing conflicts.
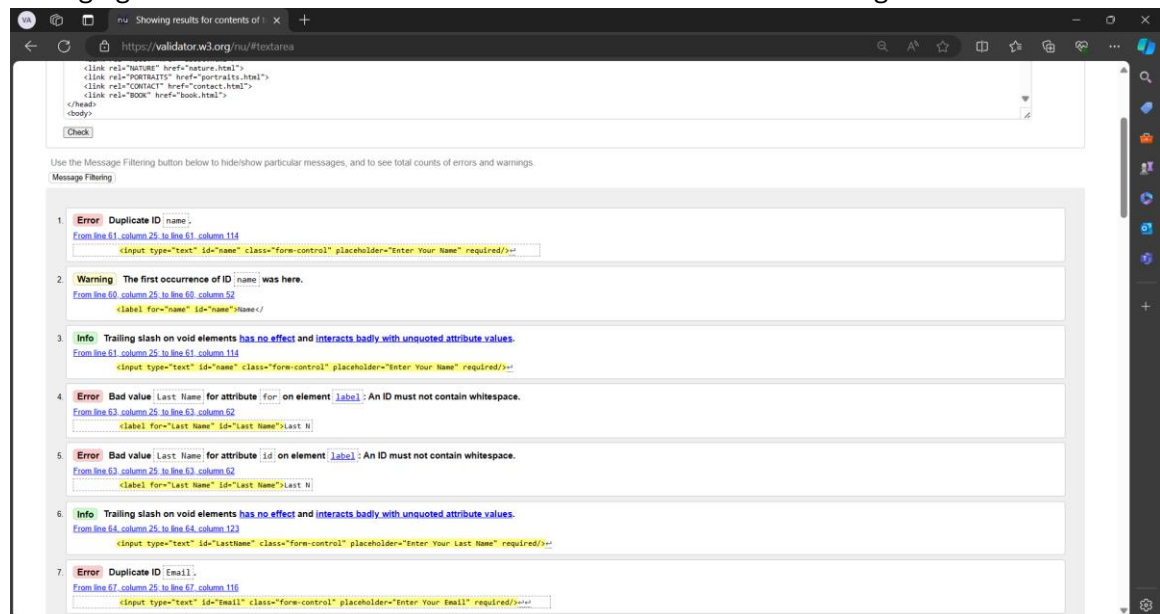

Review CSS to ensure that styles are applied consistently. Avoid redundant or conflicting styles. more general classes or use more specific selectors to target elements precisely.

Checking my code regularly for any spaces, tab characters or line breaks.

Ensure every element has a unique ID in the document.

Using classes instead of IDs, using them when identifying elements

Changing class names and elements in order for them not to clash together.

3. Book page missing back button on top of page and layout didn't turn out as planned. I wanted a back button arrow which led the user back to official book page and the layout I wanted was having the email box where the user enters his email next to the name rather than all the containers under each other. - improvements arranging the size of the contact form container and setting the layout to display flex.
4. Contact page missing footer when arranging the bottom margin, it got pushed down, whilst the nav bar got smaller. - improvements The .container div canters the content horizontally and limits its maximum width.

The image within the. image-container div fills its container horizontally without affecting the navigation bar or footer.

Adjust the CSS properties and values as needed for your specific design requirements.

More organised files and folders, clearly labelled as to identity which is which and not getting confused as I couldn't figure out for the contact page.
